

BE FLOOD-WISE

STAY UPDATED ON THE CAPE TOWN WINTER. Follow the South African Weather Service www.weathersa.co.za/wc

TIPS TO PREPARE FOR WINTER FLOODS

1 Fix leaks in your roof and walls.

2 Remove dead and burnt trees that might fall on your house or property.

3 Clear and check blocked drains and gutters around your house.

4 Dig drainage channels around your house for water to flow away from it.

5 Use sandbags along a route in your house to direct and contain the water flow, such as a pathway or down stairs. Place them at doors and in areas where water might come in when water levels rise.

WHAT TO DO WHEN A FLOOD OCCURS

1 Help friends and family by giving them temporary shelter.

2 Remove your belongings and place outside out of the water's reach.

3 Do not touch any electrical appliances. Turn off electricity, water and gas, and take your cellphone when evacuating your house.
