

BE SAFE: GET YOUR SOLAR PV SYSTEM AUTHORISED

**The City actively supports embedded generation.
By law, all systems must be authorised before installation.**

Protect your household from electrical shocks and fires from illegally connected systems.

Minimise risk of injury or death from severe shocks to electricity staff working on the grid.

Maintain power quality and load management. Pay for your use of the grid.

**CONNECTING WITHOUT AUTHORISATION IS
ILLEGAL AND DANGEROUS**

All solar PV and/or battery systems must be authorised by the City of Cape Town before switching on.

- Failure to comply could result in the disconnection of the electricity supply to the property.
- Solar water heaters do not require authorisation.
